Route Map

Public routes

Method	Path	Description	Note
GET	/	Landing page	
GET	/register/donor	Donor registration form	
POST	/register/donor	Create donor account	
GET	/register/hospital	Hospital registration form	
POST	/register/hospital	Create hospital account	
GET	/login	Login page — all roles	
POST	/login	Authenticate → redirect by role	
POST	/logout	Destroy session (POST prevents CSRF)	
GET	/email/verify/{id}/{hash}	Verify email address from link	
POST	/email/verification-notification	Resend verification email	
GET	/forgot-password	Show password reset request form	
POST	/forgot-password	Send reset link via email	
GET	/reset-password/{token}	Show reset form — user lands here from email	← required
POST	/reset-password	Save new password	
POST	/broadcasting/auth	Reverb private channel auth — auto by Laravel	← required for WS

Donor routes

Method	Path	Description	Note
GET	/donor/dashboard	Home — active notifications + requests	
GET	/donor/profile	View profile + trust badges	
PUT	/donor/profile	Update name, phone, district	
POST	/donor/availability	Toggle available / unavailable status	POST not PUT — toggle
GET	/donor/notifications	Full notification history list	
POST	/donor/notifications/{id}/read	Mark single notification as read	
POST	/donor/requests/{id}/respond	Accept or decline — body: {action}	
GET	/donor/history	Donation history + confirmed donations	

Hospital routes

Method	Path	Description	Note
GET	/hospital/dashboard	Active requests — live donor counters	
GET	/hospital/profile	View hospital profile	
PUT	/hospital/profile	Update contact info	
GET	/hospital/requests	All requests — all statuses	
GET	/hospital/requests/create	New blood request form	
POST	/hospital/requests	Submit request → triggers matching engine	
GET	/hospital/requests/{id}	Request detail + live donor responses	
PATCH	/hospital/requests/{id}/status	Mark fulfilled or cancelled	
POST	/hospital/requests/{request}/responses/{response}/confirm	Confirm donation occurred	← URL fixed

Admin routes

Method	Path	Description	Note
GET	/admin/dashboard	Platform stats overview	
GET	/admin/hospitals	All hospitals — filter: ?status=pending	
GET	/admin/hospitals/{id}	Single hospital detail + license info	
POST	/admin/hospitals/{id}/approve	Approve hospital account	
POST	/admin/hospitals/{id}/reject	Reject hospital account	
GET	/admin/users	All registered donors	
GET	/admin/users/{id}	Single donor detail + history	
POST	/admin/users/{id}/suspend	Suspend donor account	
GET	/admin/requests	All blood requests across hospitals	
GET	/admin/requests/{id}	Single request detail + all responses	

WebSocket channels

Method	Path	Description	Note
WS	donor.{id}	Event: BloodRequestCreated — notifies matched donor instantly	
WS	hospital.{id}	Event: DonorResponded — updates hospital dashboard live	

Middleware stack		
Middleware	**Applied to**	**What it checks**
auth	Donor, Hospital, Admin routes	User is logged in (Sanctum session)
role:donor	Donor routes	Authenticated user's type is donor
role:hospital	Hospital routes	Authenticated user's type is hospital
role:admin	Admin routes	Authenticated user's type is admin
verified	Donor routes	email_verified_at is not null
hospital.approved	Hospital routes	Hospital status is 'approved' — not pending/rejected
